

# Tornado On-the-Ground Real-Time Alarm

**Web Service Designed Specifically for Severe Weather Operations**

**Exclusive Live Voice Announced On-the-Ground Tornado Alarms**

**By IDHS District, State, or USA ..... Available at [tornado.weatherspotter.net](http://tornado.weatherspotter.net)**

The screenshot shows the 'Indiana On-the-Ground Tornado Alarm (V1.2)' web interface. At the top, there's a blue header bar with the title. Below it, a 'State:' dropdown menu is set to 'Indiana', with a 'Submit' button next to it. To the right, there's a 'Severe Alarm:' section with three radio buttons: 'Off' (selected), 'On', and 'Test'. A callout points to the 'State:' dropdown with the text 'Select Counties, IDHS District, State, or USA'. Another callout points to the 'Severe Alarm:' section with the text 'Enable/Disable Voice Alarm'. Below the header, a grey bar indicates '7 Total Active Alerts'. The main content area shows a 'TORNADO WARNING (CON)' issued on July 19 at 8:53 PM CDT until 9:00 PM CDT. It includes a 'NEW POST' link. Below this, it lists 'Areas Impacted: Noble', 'State(s): IN', and 'Issued By: NWS Northern Indiana'. There are two callouts: one pointing to a 'Sample Warning' button and another pointing to a 'Link to Details' button. A yellow box contains the text: '.....warning.....tornado reported on the ground... At 853 PM CDT, a confirmed tornado was located 8 miles southeast of Albion moving east at 50 mph.' Two callouts point to this yellow box: one says 'Summarizes Location of Severe Storm and Direction of travel' and the other says 'Confirmed On-the-Ground Tornado Alert'.
